The top section shows the speaker's control panel with icons for power, volume up, and volume down. To the right, a vertical strip of the speaker's surface is shown with four ports labeled Power, Micro USB, Line-in, and Line-out. Below this are four numbered diagrams: 1. A power adapter is plugged into a wall outlet (100-240V) and connected to the speaker (12 hours). 2. A hand presses the power button (ON/OFF) for 1 second. 3. A hand holds an NFC-enabled smartphone over the speaker. 4. A hand twists the speaker's ring, as indicated by a double-headed arrow.
